ionnic Technical Systems

ionnic | 

Mission Statement

To become the preferred supplier of electrical, lighting and safety solutions for mobile plant and equipment in the mining and services industry.

We will continue to improve and expand our range of products that meet and exceed OEM standards, maintaining the latest technology and innovation available backed by technical support and supply.

ICS Switch Panel

The ICS Switch Panel has been developed specifically to control lighting and other electronic automotive accessories and incorporates the latest in onboard circuit protection technology.

The switch panel and receiver communicate using a proprietary signal which allows the switching system to be configured using a single receiver module for typical applications, or with additional slave receiver modules on larger systems or vehicles.

Projected Capacitive Touch

Projected capacitive touch (PCT also PCAP) technology is a variant of capacitive touch technology but utilises a simple form of "Artificial Intelligence" to improve sensitivity to touch, accuracy, resolution and speed of touch.

This intelligent processing enables finger sensing to be projected, accurately and reliably, through very thick glass and even double glazing.

Unlike traditional capacitive touch technology, it is possible for a PCT system to sense a passive stylus or gloved finger.

Multiplexing

Multiplexing

Multiplexing is a digital communication system using a controller area network (CAN) to link modules together in a backbone network topology.

Commonly used in vehicle based and mobile plant applications, multiplexing removes the requirement for large bulky relay and fuse panels and drastically reduces the number of wires required for electrical installations.

Utilising multiplexing drastically reduces the number of wires required for electrical installations

In every installation reliability is paramount and occasionally where things don't go smoothly technicians need to be able to rectify any issues quickly and easily. In traditionally wired electrical systems finding broken wires, short circuits or faulty components can be time consuming and costly, not to mention every connection is a potential failure point.

In multiplexed systems each device around a vehicle is connected to a module using a single wire, without the requirement for fuses and relays to switch the current and protect the harness. This results in less wiring per device than in a traditionally wired electrical system.

Additionally, each module is interconnected to each other by the CAN backbone, meaning any complex logic required of the system is seamlessly handled through programming rather than intricate wiring techniques.

Utilising software with input/output data, the system is then able to provide useful diagnostic information to both the operator and the technician for use in finding any fault.

The Class 1 multiplexing system has been designed, tried and tested in the harshest of conditions on some of the most complex machines. Meaning Class 1 is ready take on any application offering faster build times, greater reliability and more flexibility through reduced connections. Additional information at the user's fingertips and advanced diagnostic data for technical and service staff, makes for an extremely powerful mobile electrical control system.

Diagnostic Capabilities

By far one of the most powerful features of this multiplexed electrical system is the enhanced diagnostic function available to the technician.

Multiple reports are available which can help track all actions and associations in the system.

The technician is able to enter the system, via a PC or the Information Display if installed, to quickly diagnose the exact problem, often without even picking up a tool.

Communication Method

Messages are sent from node to node over the J1939 CAN (Controller Area Network) data bus and are simple 8-bit signals, similar to the signals used in your computer at home.

The signals transfer throughout the system at a rate of 250,000 bits per second, allowing plenty of room for all messages to get to and from the respective nodes.

Additionally, using the communication network, the system can constantly monitor any device attached to it.

Through the intelligence of the software, the multiplexed system can be "taught" to look for certain problems and conditions in the system and act on the information, or indicate the condition to the operator on the System Display. This communication tool will increase the operator's ability to monitor and control activity on the vehicle.

Multiplexing

Ultraview Touch Series

Class1
ELECTRONICS

Displays / HMI

Ultraview Touch Series

- Projected capacitive touch screen on all models – can be used while wearing gloves.
- J1939 CAN based information display incorporating programmable switching.
- Infinitely customisable.
- Bonded LCD screen viewable in direct sunlight and whilst wearing polarised lenses.
- Reverse polarity and EMF protected.
- Horizontal or vertical screen orientation.
- Environmentally sealed – IP67.
- Models with tactile buttons.
- Multi-voltage.
- Made in North America.

6V 36V IP67 Made in North America

Voltage : 6–36V
Video Input : NTSC/PAL
Output : Digital 500mA
CAN : SAE J1939, NMEA 2000
Construction : Polycarbonate
Ingress Protection : IP67
Vibration : 7.86G rms 5–2000 Hz, 3 axis
Shock : +/- 50G, 3 axis
Operating Temperature : -40°C to 85°C

 Supplied with bolts/nuts and washers.

Configuring the Ultraview Displays

Smart Touch Panel, found on page 24.

The Ultraview Touch interface can be infinitely customised to display and interact with the user, either through physical buttons, via touch screen or both.

If a design can be imagined, then the Class 1 team can assist in turning your concept into reality.

Once all operational requirements are determined, an interface is designed and programmed specifically for the application. All graphical elements including, colours, backgrounds, dials, gauges etc can be enhanced with real time animation.

A range of standard templates are available for less complex interface requirements.

Touch Interface

Touch Screen

Directly touching an icon or image on a screen is a popular and intuitive way to interact with a device.

Not being restricted by physical switches allows for a greater variety of actions and increased operational efficiency.

Combination

Some operators prefer physical buttons, others instinctively touch the screen.

The Ultraview series allows for both to be used, providing system designers and operators the flexibility to perform tasks in a manner best suiting their preference.

Tactile Push Buttons

Backlit push buttons are able to be configured to operate with all Ultraview displays. The switches are designed to provide positive tactile confirmation when pressed, even when wearing gloves, giving the operator confidence when actuating a switch function.

Personalisation

Splash/Intro

An initial screen shown during the power up of the Ultraview display can be customised with manufacturer/customer logo, graphic or message.

Display Video

Video

Ultraview screens can display video from either PAL or NTSC cameras. The image can be configured to the full height of the display or resized to be viewed in conjunction with other on-screen elements.

Warnings

There are several methods available to draw an operator's attention to a specific area of the Ultraview interface. The most popular are shown below.

Banner

This is typically a partial overlay on the current working screen when a trigger is activated or a parameter is out of range. This could show momentarily, or clear upon confirmation or item rectification.

Highlights

A gauge face turning red, a section of a graphic changing colour or simulated illumination can be used to show that a particular function is activated, a door or locker open or a work lamp is turned on.

Icons

Used in a similar way to a warning lamp or status notification, icons can be used to show that an item is activated or that a component is out of its operating range.

Combination

A combination of these events may be used to illicit action by the operator. The Ultraview Series also provides an output for an audible alarm if required.

Gauges

Traditionally machine operations are represented through analogue instruments and devices, the most effective of these have been programmed to display virtually on screen in the Ultraview series.

Rotary

The most common gauges viewed in equipment today. Typically a round fascia with a coloured needle to indicate the level reached by the sensor/pickup. The flexibility of the Ultraview rotary gauge is the ability to design it to whatever size, shape, colour etc the user desires.

Bar

A column of colour moving on a scale to indicate the feedback from a sensor or pickup. Orientation, colour, and triggered effects can be applied to this gauge to bring this component to life. Curving a bar graph around a gauge or graphic can add to the visual effect whilst being more space efficient.

Text/Digital

Usually a numerical value that changes based on the feedback from the sensor or pickup. Size, colour, and update rate are configurable to suit operational needs.

Combination

Combining two or more gauges is often the best way to display multiple pieces of related information at a glance. The flexibility of the Ultraview configuration software enables this and many more creative ideas.

- Easy to read QVGA 3.8" monochrome LCD screen with backlight and heater.
- Displays gauges, soft key commands, and custom messages.
- 5 tactile push buttons.
- J1939 CAN based information display incorporating programmable switching.
- Custom interfaces available on request.
- Reverse polarity and EMF protected.
- Connector kits available providing all required connectors, contacts etc.
- Environmentally sealed – IP67.
- Multi-voltage.
- Made in North America.

- Developed to control lighting and other electronic automotive accessories.
- Incorporates the latest in onboard circuit protection and monitoring technology.
- Each output surge protected to 6A.
- 3 user configurable master switches.
- All switches can be set to latching or momentary.
- Mounting point on back of switch panel – use with common 1/4" thread adjustable mounts.
- Epoxy encapsulated receiver module for enhanced moisture and vibration protection.
- Includes 4 decals.
- 8 outputs (6A each).
- Multiple outputs can be combined to allow switching of high current loads.
- Eliminates excess wiring.
- Multi-voltage.
- Compact design.

Voltage :	12–24V
Outputs :	8
Max. Output Current Rating (per output) :	6A
Max. Output Current Rating (total) :	40A
Cable Length :	4.5m
Construction :	ABS
Operating Temperature :	-40°C to 85°C

The ICS Switch Panel has been developed to control all types of lighting and other electronic automotive accessories.

The switch panel and receiver communicate using a proprietary signal which allows the switching system to be configured using a single receiver module for typical applications, or with additional slave receiver modules on larger systems or vehicles.

The ICS Switch Panel incorporates the latest in onboard circuit protection technology. In the event of a short circuit the system immediately turns off the affected output preventing damage to the switch panel and devices controlled by it.

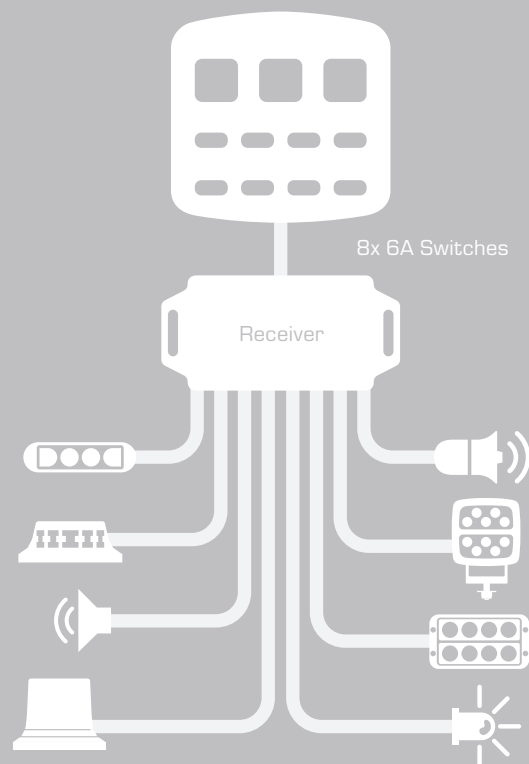

The panel provides real time feedback to the operator via LED's on both the panel and receiver module as to the state of each output.

In the event of an intermittent short circuit the output of the affected circuit will turn off and remain off for 4 seconds.

After this period of time the ICS will check the circuit, if no short is present it will automatically turn the output back on.

All circuits are monitored and controlled independently. In the case of a short circuit only the affected output is isolated while all others remain operational.

Master Switches

The ICS switch panel features 3 user configurable master switches. These switches can be used to link any combination of the 8 individual switches together to allow activation of multiple circuits via the switching of a single button. Note individual switches can be associated to more than one master switch.

Custom assign any number of buttons to one of the three master switches

Watch video

Receiver Module

Mounting point on back of switch panel – use with common 1/4" thread adjustable mounts. Not supplied with mount.

9V 32V IP67 Made in North America

- Easy calibration (1 to 9 point) suitable for all tanks of any size or shape.
- Programmable output, typically used for auto-fill function, low/high tank level warning etc.
- One wire data link allows for unlimited optional remote displays.
- Ultra bright LEDs easily viewable from 180° to 9 precise tank levels.
- Custom scrolling text sequences on power up.
- Built-in self diagnostics displayed through scrolling text.
- Optional remote driver module used to control external lights, sirens etc concurrent to ITL display.
- Uses proven industrial pressure transducer instead of probes.
- Multiple programmable features inbuilt, including LED dimming level and anti-slush function.
- Rocker switch sized Mini Remote Indicator available.
- Made in North America.

Voltage : 9-32V
Current Draw : 100mA @ 13.8V
Output : Digital 250mA ground
CAN : SAE J1939
Construction : Polycarbonate
Bezel : Die-cast Alloy
Ingress Protection : IP67
Operating Temperature : -40°C to 85°C

ITL-40 System Layout 1 – Simple Install

Illustration shows a typical tank monitoring system demonstrating the simplicity of installation and the use of the programmable output function.

Typically used for auto-fill function, low/high tank level warnings etc.

Emergency Services App

Emergency Services Vehicle Fire Appliances

For decades Class 1 systems have been the backbone of the fire appliance and allied emergency services vehicle industry.

Adoption of Class 1 multiplexing has simplified and reduced the hardware components required for the electrical system and have also increased the range of possibilities of what can be controlled.

- Pump governing
- Fluid level monitoring
- Fluid flow control
- Lighting operation
- Switch operation
- Safety interlocking
- P.T.O.
- Light mast
- Warning indication
- Interface with OEM chassis
- Emergency lighting
- Inbuilt diagnostics
- Low voltage management

9V
32V Made in North America

- Utilises SAE J1939 CAN standard to record NFPA required data.
- Large Seat Belt Warning System displays the status of up to 12 seats simultaneously.
- Display available in rocker size, can be integrated with Supernode.
- Can integrate with Vehicle Data Recorder for event archiving, see page 66.
- Input Module is environmentally sealed – IP67.
- Multi-voltage.
- Made in North America.

Voltage : 9-32V
 CAN : SAE J1939, 250 Kbit/second
 Construction : Polycarbonate
 Ingress Protection : Input Module IP67
 Operating Temperature : -40°C to 85°C

Seat Belt Warning System – Input Module

Part No. 118093 Current Draw (mA) @ 13.8V 57

Indicates all occupied seats have seat belts engaged

Each occupied seat without a seat belt engaged is momentarily displayed until all are engaged

118620

Seat Belt Warning System – Displays

Part No.	Description	Current Draw (mA) @ 13.8V
118551	Large multi-seat belt display	75
118620	Small seat belt indicator	57

Minder Series Kits – Loadminder

Part No.	Description	Kit Contents
LMS	Loadminder Kit	1 x Display (111653) 1 x Decal "LOW LEVEL AERIAL LOADING" (101995) 1 x Pressure Transducer (102606) 1 x Silence Button (102088) 1 x Buzzer 90dB (100571) 1 x Harness – 3m (102671) 1 x Display Mounting Kit (102008)

Loadminders display the current low-level load in a simple, easy-to-read LED bar style display that instantly adjusts as the ladder angle, extension or live load changes.

As the loading increases, so does the number of bars that are illuminated on the display. When the maximum low-level loading approaches (as determined by the aerial manufacturer and calibrated at the factory) the display will begin to flash.

A slight (25-50kg) additional load will cause the audible alarm to sound which alerts the operator to an overload condition.

- Display flashes when approaching maximum load
- Audible alarm when maximum reached
- Auxiliary output activates strobe (optional)

Displays / HMI

Minder Series Kits – OxyMinder

Part No.	Description	Kit Contents
OMS	Oxygen Minder Kit	1 x Display (111654) 1 x Decal "% OXYGEN REMAINING" (101996) 1 x Pressure Transducer (102606) 1 x Silence Button (102088) 1 x Buzzer 90dB (100571) 1 x Harness – 3m (102671) 1 x Display Mounting Kit (102008)

OxyMinder displays current oxygen level in a simple, easy-to-read LED bar style display.

- Display flashes at 25% total air capacity
- Audible alarm sounds at 20% air capacity

Minder Series Kits – AirMinder

Part No.	Description	Kit Contents
AMS	Airminder Kit	1 x Display (111655) 1 x Decal "% AIR REMAINING" (101994) 1 x Pressure Transducer (102606) 1 x Silence Button (102088) 1 x Buzzer 90dB (100571) 1 x Harness – 3m (102671) 1 x Display Mounting Kit (102008)

Airminders display current breathing air level in a simple, easy-to-read LED bar style display.

- Display flashes at 25% total air capacity
- Audible alarm sounds at 20% air capacity
- Ideal for aerials, aerial platforms, air trucks and C.F.R. vehicles

Minder Series Kits – Spare Part

Part No.	Description	Suits
100944	Replacement display bezel	All Minder Series

Electrical

IONNIC Recessed E-Stop Kits

All new kits featuring Pressed Coated Steel or Nylon PA66 recessed housings.

- Protects and helps prevent accidental switch activation.
- Supplied with latching Telemecanique emergency stop switch.
- N/O or N/O & N/C contact block options.
- Round 'Emergency Stop' legend included.
- Available in kit and component form.
- Coated carbon steel or Nylon PA66.
- Multi-voltage.

IONNIC Hand Brake Alarm Module – Now with Self-Learning Function

Designed to signal when hand brake is not engaged and vehicle door opens, this universal 2-stage alarm module can be adapted to suit any vehicle.

- Self learning function automatically detects vehicle triggers for quick and easy installation.
- Satisfies mine site requirements.
- 2 stage outputs.
- Compact easy installation.
- Suitable for positive and negatively switched vehicles/applications.
- Epoxy filled for enhanced moisture and vibration protection.
- 2 year warranty.

Made in North America

- SAE J1939 CAN engine message reception and Es-Key network controller.
- Digital circuit breakers on all positive outputs.
- Output 'open load' detection.
- Diagnostic LED indicators.
- Optional modem available upon request.
- Selectable polarity for digital inputs models.
- Environmentally sealed – IP67.
- Multi-voltage.
- Made in North America.

Voltage : 9–32V
 CAN : SAE J1939
 Construction : Die-cast/Polycarbonate
 Ingress Protection : IP67
 Operating Temperature : -40°C to 85°C

Integral power connectors, suits TE DEUTSCH DTHD connectors

USB port for database transfer and diagnostics

Input and output LED status indicators

Centralised Consolidation

The Supernode II consolidates the functions of several modules – USM, Data Logger, Seatbelt, Vehicle Data Recorder (VDR), Climate Control, I/O Module & Power Distribution Module. This reduces node count and simplifies addressing making it well suited for applications where a centralised node location is required.

Class 1 DTD Programming

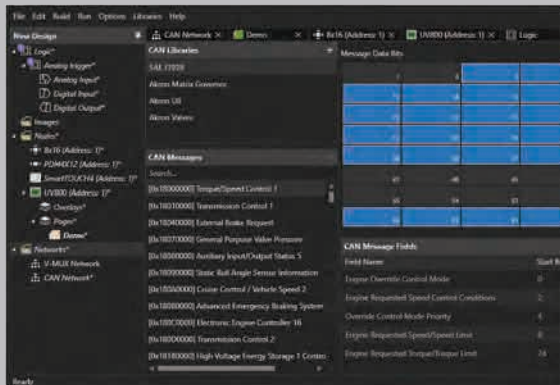

Class 1 configurable components can be programmed to operate according to the user's specific requirements. This is done using the DTD (Digital Truck Designer) software to program the system manager, which in turn is connected to each component on the network.

The DTD software is an all in one program allowing the user to set up and program each component of an Es-Key network in a simple, user-friendly environment.

Each component on the application is added to the list of inputs, renamed for easy reference, and programmed to operate accordingly.

Programming can be as simple or as complex as required. All this is done through a comprehensive graphical user interface.

- Highly intuitive graphical user interface
- Rename circuits for easy reference
- Nest logic to perform any interlock
- Use previously designed component nest logic simply
- Simple to highly complex logic statements – it's up to you
- Use virtual circuits to create custom program functions
- Automatically create printable system reports
- Wire vehicles the same and change their behaviour by simply changing the program
- Activate options, change flash patterns and load management settings without changing a single wire

Diagnostics

The advanced diagnostic capability of the DTD program makes fault checking easier than ever. Connect to your vehicle locally or remotely, to initiate and simplify the diagnostic process.

Troubleshoot the entire system or just a single output. With the ability to force on or off any input/output, the software can assist with much of the fault diagnosis process before even opening your toolbox.

- Download reports and data logger information
- Real-time feedback
- Local or remote connection capability
- Detailed CAN information
- Fault code reporting
- Module status information
- Easy download capability
- Force on or force off any input or output

Easily see a comprehensive graphical view of the entire network

I/O Controllers

I/O Modules

- Introduces switched inputs into the Es-Key network.
- 610-00041 incorporates H-Bridge functionality.
- Up to 18 inputs and 16 outputs.
- Environmentally sealed – IP67.
- Multi-voltage.
- Made in North America.

9V 32V IP67 Made in North America

Voltage : 9–32V
CAN : SAE J1939
Construction : Polycarbonate
Ingress Protection : IP67
Operating Temperature : -40°C to 85°C

Accelerometer Input Signal

The 610-00033 can accept multiple input signal types.

- Voltage – 0 to 5V/30V
- Current – 4 to 20mA
- Frequency – 5V peak to peak, or system voltage
- Resistance – 0 to 2800 Ohms

I/O Modules – Accelerometer

Part No.	Description	Input Signal Source		Digital Input	Digital Output	Polarity		Input Signal
		Internal	External			Input	Output	
610-00033	Accelerometer	2	2	1	1	Selectable	-0.25A	See above

I/O Controllers

H-Bridge Functionality

An H-bridge is an electronic circuit that switches the polarity of a voltage applied to a load. These circuits are often used in robotics and other applications to allow DC motors to run forwards or backwards.

Power Distribution Modules

120727

- Supplies power to system loads, and introduces digital/analogue inputs into the Es-Key network.
- Selectable polarity for digital inputs models.
- Up to 21 outputs from a single module.
- High current model features 30A continuous output current rating.
- HD PDM & HC PDM incorporate LED displays with 2 buttons for diagnostic, indication and configuration purposes.
- Environmentally sealed – IP67.
- Multi-voltage.
- Made in North America.

MATRIX

Pressure Governor

MatrixGOVERNOR II

Safely and confidently control your pump discharge pressure

Flexible, powerful and state-of-the-art. The MatrixGOVERNOR II monitors and controls your pump discharge pressure to maintain desired operating pressure range.

With intelligent controls, it detects conditions when water supply is reduced or cut off and reacts the way an operator would to keep engine speed from increasing out of control.

SAE J1939 compliant stand-alone fully functional pressure governor module maintains set pressure by reducing or increasing engine RPM.

The MatrixGOVERNOR II features self-diagnostics which sends out alerts when an error or fault condition occurs. It saves and sends pump session data, alarms, fault codes and errors over CAN for capture and analysis.

With flexible programming options – four levels of options providing customization of pump control settings, the MatrixGOVERNOR II can do what you want when you want. Featuring advanced settings for warnings and alarms, units of measure, control ramp rates, stability settings, max pressure settings and more.

Ultraview Touch Series

Intelli-Tank Level 40

Twister

Fully networked system allows controls from multiple locations with various user interfaces

Smart Touch Switch Panels

- SAE J1939 compliant stand-alone fully functional pressure governor module.
- Monitors discharge pressure and maintains set pressure by reducing or increasing engine RPM.
- Hard wired interlocks (throttle ready, pump engaged, ok to pump).
- Increase, decrease, idle, mode (pressure or RPM), preset, high idle inputs.
- Programmable default mode (pressure, RPM or none).
- Self-diagnostic options – sends out alarms and warnings when error or fault conditions occur.
- Made in North America.

Governors

Sentry Governor Kits

9V 32V IP67 Made in North America

- SAE J1939 CAN based pressure governing system.
- Controls engine speed directly over J1939 network or analogue control.
- Monitors RPM and other pertinent data directly from the engine ECU.
- 4.3" full colour LCD display with 8 tactile feedback buttons.
- Kits include Sentry display, Twister throttle, pressure transducers and associated wiring.
- Available in horizontal or vertical models.
- Advanced diagnostics – 2 levels, one for operator and one for maintenance technician.
- Environmentally sealed – IP67.
- Made in North America.

Voltage : 9–32V
Current Draw : 240mA @ 13.8V
Analogue Output : 0–5V
CAN : SAE J1939
Construction : Polycarbonate
Ingress Protection : IP67
Operating Temperature : -40°C to 85°C

Vertical orientation

599-00010-001

Advanced Diagnostics

The Sentry Governor pressure system has advanced diagnostic features unparalleled in the fire service industry.

It provides two levels of diagnostics; one for the operator, and one for the maintenance technician.

Error screen describing issue with suggested solution and illustration.

 2 x Transducer 0-300 PSI (113557)

Optional 0-600 PSI transducer available, see page 75.

- Class 1's Twister is an electronic vernier style throttle for controlling the speed of:
 - SAE J1939 CAN compliant engines
 - Analogue (DC voltage) controlled engines
- Power-on state is always idle.
- Interlocked for safety.
- Clockwise or counter-clockwise operation.
- Ergonomic control with tactile feedback.
- Large and easily accessible idle button.
- Bright LED indicators. "Throttle Ready" for interlock, and "Active" for active engine control.
- Environmentally sealed – IP67.
- Made in North America.

Voltage : 9-32V
Current Draw : 240mA @ 13.8V

9V 32V Made in North America

Voltage : 9-32V
 CAN : SAE J1939
 Construction : Powder-coated Steel
 Operating Temperature : -40°C to 85°C

Topography

Class 1 recommends using shielded cable for all sensor connections (PH375BK). For a complete listing of cables see page 92. For connectors see page 86-91.

Climate Control Module

Part No.	Current Draw (mA) *		Max. Output Current Rating (A)			
	@ 13.8V	@ 27.6V	Fan Motors	AC Clutch	Heat Valve	Aux Output
610-00029	72	36	25	15	15	0.25

* Current Draw does not include draw from outputs.

Functionality of this module is integrated into the Supernode II (page 42) with firmware version 9.05 or later.

CONNKIT-CCMODULE

Auxiliary Controllers

Vehicle Data Recorder

9V 32V IP67 Made in North America

- Utilises SAE J1939 CAN standard to record NFPA required data.
- Retains last 100 hours of stored data in memory.
- Internal real-time clock with 10 year battery back-up.
- Integrates with Seat Belt Warning System (page 34) to record seating data.
- 32-bit ARM processor.
- Software available for quick & easy data retrieval. Supplied upon request.
- USB port for data retrieval via VDR management software.
- Monitors and records Engine RPM, Throttle percentage, vehicle speed, ABS events, transmission range information, parking brake position, master warning position, seatbelt status.
- Made in North America.

Voltage : 9-32V
 Current Draw : 55mA @ 13.8V
 Output : 250mA per Output
 CAN : SAE J1939
 Construction : Polycarbonate
 Ingress Protection : IP67
 Operating Temperature : -40°C to 85°C

Crimping tools can be found on page 96.

- Provides remote connection to compatible devices.
- Multi-carrier 4G LTE connectivity.
- Dual SIM card port (2x Mini 2FF).
- Multiple communication ports.
- Routing capabilities provide secure, reliable communication.
- Triggers alarms and sends SMS messages.
- Built-in GPS.
- Built-in Ethernet and serial connectivity.
- Data usage alerts via email/sms.
- Low power consumption.
- Made in North America.

Voltage :	7-30V
Current Draw :	0.15A
CPU :	32-bit ARM9 400 MHz
NAND :	512MB
RAM :	128MB
Ethernet :	10/100 Base-T RJ45 Ports
Serial :	RS-232 (DB9) 115,200bps
Antennas :	4x SMA Connectors
Humidity :	5 to 95% non-condensing
Approvals :	FCC/IC, UL HazLoc, PTCRB
Operating Temperature :	-40°C to 85°C

Made in North America

7V
30V

Gateway Router

Secure and reliable wireless communication to remote assets. Telstra extranet 4G LTE connectivity with fallback to 3G network.

Featuring a web-based event engine that can trigger alarms and send SMS text messages based on real-time operational data.

Reliable local control and alerts of critical events sent to personnel.

ESM Mini Kit

12V
24V

- Electronically controlled switch module with inbuilt circuit monitoring and protection.
- Each output surge protected to 8A.
- 6 inputs, 6 outputs – 12V.
- 5 inputs, 5 outputs – 24V.
- Compact design.
- Save space and installation time.
- Eliminates excess wiring.
- Multi-voltage.
- Epoxy filled for enhanced moisture and vibration protection.

Voltage :	12–24V
Inputs :	6 x 12V, 5 x 24V
Outputs :	6 x 12V, 5 x 24V
Max. Output Current Rating (per output) :	7A
Max. Output Current Rating (total) :	20A
Body :	ABS
Cable Length :	120mm
Operating Temperature :	-40°C to 85°C

The ESM Mini is a compact, electronically controlled switch module with inbuilt circuit monitoring and protection.

The unit can be used in any application where conventional circuit protection may have been used in the past.

The ESM Mini can be used for any application, from connecting auxiliary lighting off original vehicle tails lights, e.g. Minebar hook up, to monitoring and protecting a range of auxiliary equipment switched off the original vehicle inputs or from after market toggle, rocker switches etc.

If a short circuit or over current condition presents on any of the outputs then the affected output will shut down. This circuit will then cycle 3 times (on/off) and if the over current situation is still present the output will then be locked in the off state until the fault is rectified and the input is reset.

Circuit 1	Circuit 2	Circuit 3
Input - 4	Input - 2	Input - 6
Output - 3	Output - 1	Output - 5
Circuit 4	Circuit 5	Circuit 6
Input - 11	Input - 9	Input - 7
Output - 12	Output - 10	Output - 8

Inductive loads must not be used on the input or output circuits without additional external protection. Failure to do so may result in damage to the unit and will void warranty.

Class 1 provides a wealth of control and display flexibility giving the operator feedback at a glance.

By providing flexible uniform multiplex solutions and shorter prototype development, an improved overall build process schedule is achievable.

- Lighting control
- Switch operation
- Safety interlocking
- Subsystem control and monitoring
- Interface with OEM engines
- Inbuilt diagnostics
- Air conditioning climate control
- Multi-level password access
- Interface with vehicle suspension, transmission and engine systems

Sensors & Switches

- Wide range of sensors used to introduce input variables into the Controller Area Network (CAN).
- Side Mount Level switches are ideal for tank level applications with most commonly used liquids.
- Multi-voltage on most sensors & switches.
- An I/O Module or PDM provides a pathway for analogue signals into the network, these can be found on page 46 & 50-51.
- All sensors environmentally sealed – IP67.

Does your sensor require a module?

Analogue Sensors require an I/O Module (found on page 46) or a PDM (found on page 50-51) in order to transmit sensor data onto the Controller Area Network (CAN).

CAN Sensors, such as CMP0.5.OM, do not require an I/O Module or a PDM.

- Transparent housing with integrated LED on wedgelock for quick circuit diagnosis.
- Colour coded wedgelocks for operating voltages, 12V (yellow) and 24V (red).
- Joint retention fingers allow both contacts to be removed at the same time.
- Compatible with Pulse Width Modulated control.
- Sold as kit including nickel-plated or green band contacts.
- Environmentally sealed – IP68, IP6K9K, when installed to manufacturer's specifications.
- Industry proven TE DEUTSCH DT Series.
- Latched mating.

Housing : Ultem
Seal : Silicone Rubber
Wedgelock : Thermoplastic
Contact Size : 16
Contact Rating : 13A @ 125°C
Shock : 50G
Vibration : 20G rms 10 – 2000Hz
Approvals : 20mm Flame Test per Standard UL-94
Ingress Protection : IP68, IP6K9K
Operating Temperature : -55°C to 125°C

Half Kits

Half Kits contain all components to make one half of a connection.

Each kit contains 2 x contacts and a DT Detector receptacle with a DT Detector Wedgelock.

Backsense Network Radar

Monitor not included with kit

- Overlay detection data for up to 2 radar sensors on a single monitor.
- Compiles with CAN 2.0A Base Frame Format.
- Detects multiple moving and stationary objects.
- High frequency continuous wave provides increased reliability & low false alarm rates.
- Adjustable detection range up to 30m.
- 3 trigger inputs used for activating components such as alarms and beacons.
- Environmentally sealed sensor – IP69K
- Sensor can be steam & pressure cleaned.
- Multi-voltage.
- 3 year warranty.

Voltage :	12-24V
Current Draw :	0.4A
Radar Frequency :	24.05GHz to 24.25GHz
Weight :	Radar Sensor 0.7kg
Vibration :	8.3G
Shock :	100G
EMC :	CE & 'e' marked
Operating Temperature :	-40°C to 85°C
Ingress Protection :	IP69K

Backsense Network Radar

Brigade's Backsense® Network Radar is the next generation of radar-based obstacle detection. Due to the number of complex blind spots on a vehicle, a single radar cannot always provide the detection required. Additionally, multiple in-cab displays for multiple radars can be more of a distraction than a benefit. Aimed at OEM and specialist applications, Brigade's Network Radar OSD kit allows you to connect and link 2 sensors to cover large, sometimes complex blind spot zones around a vehicle or machine.

On-Screen Display

Multiple radars with individual in-cab displays can cause confusion and also be a challenge to install. Brigade's latest innovation, the Backsense® OSD (On-screen Display) ECU allows for the use of 2 Backsense® Network Radar units to be combined with any Brigade Backeye® camera system.

Radar detection data is overlaid transparently* along the edge of the monitor so as not to obscure the camera image with the audible warning via the monitor speakers.

* Transparency level can be adjusted via software.

When an object is detected in the YELLOW zone, the associated on-screen indicator will turn yellow and a pulsed audible alert is played through the monitor's speaker. 🗣️)))))) 🗣️

When object is detected in RED zone, the associated on-screen indicator will turn red and a constant audible alert is played through the monitor's speaker. 🗣️))))))))) 🗣️

Each radar sensors detection notification can be assigned to one of eight predefined positions overlaid around the edge of a monitor.

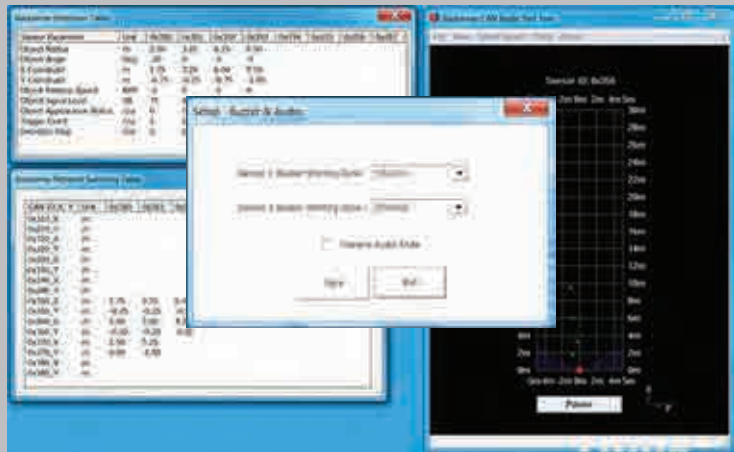

Configurable

Backsense® Network Radar with OSD Kit is supplied with easy to use PC software used to adjust the following parameters:

- Detection zone length & width
- Blind area mapping
- Buzzer starting zone
- Trigger output length

Download the latest software and manual from ionnic.com

Controller Area Networks (CAN)

Controller Area Networks, or CAN are multiplexed control systems. Multiplexing allows multiple data signals to travel on the same wires, integrating separate electronic systems and applications to a single point of control and monitoring system.

J1939/11

J1939/11 is a 3-wire system that uses the TE DEUTSCH DT series connectors primarily for truck and bus. The DT series accepts size 16 contacts. Connector options include in-line, bulkhead, "Y" splitter, and terminating resistors.

CAN Connectors – J1939 Bus Splitter Kits ★

Part No.	Description
CONNKIT-4JUNCTION	CAN bus 2 branch hub with mating connectors + 120 Ohm resistor plug

- Kit Contents:
- 1 x CAN Bus 2 Branch Hub (CONNKIT-4)
 - 4 x Plug – DT Series – 3 Circuit (DT06-3S-CO15)
 - 1 x DT Series 120 Ohm Resistor (DT06-3S-P006)
 - 2 x Wedgelock – Green (W3S-P012)
 - 2 x Wedgelock – Blue (W3S-1939-PO12)
 - 12 x Contact – Socket – Gold-Plated (0462-201-1631)

Part No.	Description
CONNKIT-6JUNCTION	CAN bus 4 branch hub with mating connectors + 120 Ohm resistor plug

- Kit Contents:
- 1 x CAN Bus 4 Branch Hub (CONNKIT-6)
 - 6 x Plug – DT Series – 3 Circuit (DT06-3S-CO15)
 - 1 x DT Series 120 Ohm Resistor (DT06-3S-P006)
 - 4 x Wedgelock – Green (W3S-P012)
 - 2 x Wedgelock – Blue (W3S-1939-PO12)
 - 18 x Contact – Socket – Gold-Plated (0462-201-1631)

- Breakaway coupling specifically designed to prevent damage to vehicle wiring and/or the attached implement by safely disconnecting and separating from vehicle in the event of an operator driving away without disconnecting beforehand.
- Dust cap suits all shell size 24 HD30 and HDP20 series connectors.
- Ideal for use in agricultural equipment as well as the truck, bus, mining and construction industry.
- Environmentally sealed – IP68, IP6K9K, when installed to manufacturer's specifications.
- Resistant to most fluids in industrial applications.

Housing :	HD30 Series	Aluminium
	DT Series	Thermoplastic
Seal :		Silicone Rubber
Shock :		50G
Vibration :		20G rms 10 – 2000Hz
Approvals :	20mm Flame Test per Standard UL-94	
Ingress Protection :	IP68, IP6K9K	
Operating Temperature :	-55°C to 125°C	

HDBOX-24-91PN – Breakaway CAN Termination Assembly

Originally designed for agricultural applications, the TE DEUTSCH HDBOX-24-91PN Breakaway CAN Termination Assembly creates a communication pathway between an on-board CAN system and the electronic components on an attached implement.

The HDBox, which holds two DT13 connectors and an HD30 Series receptacle, mounts on the vehicle and mates with an HD30 Series plug connector featuring a breakaway coupling ring.

TE DEUTSCH breakaway couplings are designed to prevent damage to the CAN wiring of the vehicle and/or the attached implement by disconnecting and separating from the vehicle in the event of an operator driving away without disconnecting beforehand.

Houses
1 x DT13-2P, 1 x DT13-4P

Mates with

0462-203-12141	Contact – Socket – Solid – Size 12	
0462-201-1631	Contact – Socket – Solid – Gold-plated – Size 16	

- Range of data cable available – Standard, Medium, Heavy Duty and Shielded.
- Noise suppressing ferrites available – Ø 19.3mm & Ø 27mm.
- Wide range of crimping tools available.
- HDT-48-00 crimps a wide range of contact sizes with no need to change out dies or locators.
- Ratcheting tools will not release contact until a full crimp is completed.

Noise Suppression

Electromagnetic interference (EMI), also referred to as noise, is disturbance that affects an electrical circuit due to either electromagnetic induction or electromagnetic radiation emitted from an external source.

The disturbance may interrupt, obstruct, or otherwise degrade or limit the effective performance of the circuit. These effects can range from a simple degradation of data to a total loss of data.

A simple solution to electrical interference from noise is the utilisation of suppression ferrites. Ferrites are moulded metal powders, (ceramic), cast into various shapes and sizes.

Ferrite with Key (7427155)

A typical style of ferrite are clip-on chokes/suppressors. Simply open and snap around the wires or cables emitting the noise.

You can stack as many as you want over a single pair or bundle of wires. In situations with severe noise problems multiple ferrites can be stacked.

Ferrites are non-conductive so can be used almost anywhere, including on higher voltage power lines and battery/inverter cables.

5 Piece Crimp Tool Set for Packard™ Contacts

Tool Set contains tools suitable for:

- AMP Superseals
- Weather-Pack
- Metri-Pack 150, 280, 480 & 630 series
- Micro-Pack O64, 100 & 100W series.
- GT 150, 280, 630 series
- And other brands including Molex, Yazaki, Sumitomo etc

All housed in a handy storage tray.

Also included in the kit is a 32 page instruction manual detailing tool specifications as well as an OEM contact number/tool number matrix.

All tools in kit are premium quality – made in the USA.

General Information

ITS 2022 Version 1.0 - 09/2022

This reference manual supersedes all previous editions.

Auto Electrical Imports Pty. Ltd. reserves the right to change, or discontinue products or specifications without notice. All data and assistance is given as a general guide only and the final decision on suitability and application must be with the customer.

All bulk quantities of contacts, sealing plugs & wedgelocks are calculated by weight, a +/- 2% variation accepted.

Warranty Statement

Auto Electrical Imports Pty. Ltd. warrants the replacement only of products for a period of 12 months, unless otherwise stated, from date of purchase against faulty workmanship and material components.

Class 1 products are covered by a 2 year replacement warranty.

Disassembly or modification of products may void warranty.

Warranty claims may only be returned by prior arrangement.

For a full statement outlining our warranty visit www.ionnic.com/warranty-statement
